Description: The Banking Management System is a software application that will be developed to automate and manage various banking activities, such as account management, transaction handling, and reporting. The system will be designed to improve the performance and efficiency of banking operations, while also ensuring data security and accuracy.

Requirement :

- The application should have a user-friendly interface that allows customers to easily navigate and perform banking operations.
- Users should be able to securely log in to their accounts using authentication methods such as passwords.
- The application should provide real-time access to account balances, transaction history, and other account details.
- Users should be able to transfer funds between their accounts, as well as to other accounts within the same financial institution.

- Users should be able to view and manage their transaction history.
- The application should provide notifications and alerts for important account activities, such as low balances or large transactions.
- Users should be able to customize their preferences and settings within the application.

Features:

- Login
- Check Balance
- Deposit Money
- Withdraw Money
- Transfer Money
- Account details
- Transaction details
